

Bar B01P User Guide

NOTICE

■ Notice

During the installation of the Bar pickup, you need to pay attention when grinding the chord. When grinding the chord, make sure to flatten the bottom of the chord and make it 90° with each side. Will make the lower pillow and the piezoelectric pickup stick can not fully contact or uneven force, resulting in uneven pickup of the strings when the pickup is picked up, or other problems, when grinding the string pillow carefully, not too rush, it is best to use The original string pillow was successfully polished at one time. In order to prevent you from grinding the string pillow, we also provided you with a cow bone material bottom string pillow, but it is best to use the original bottom string pillow and slowly polish the bottom string according to the installation instructions. pillow.

The Bar pickup is powered by a 9V battery. When not in use, disconnect the cable at the end of the guitar to save battery power. If there is no sound when using it, first check whether the plug at the end of the guitar is plugged in, and turn up the volume of the pickup. If there is still no sound, unplug the tail of the guitar, and touch the head of the plug of the guitar cable with your finger. Listen for any sound. If there is sound, re-plug the guitar cable into the 6.35mm tail tube of the pickup, and turn the volume knob to check whether there is sound. If there is no sound, it is likely that the 9V battery is exhausted. A new 9V battery will solve the problem.

All other types of pickups may produce howling due to feedback. The pickup and feedback system constitute a loop to generate feedback. The feedback feedback is amplified again to generate howling. Common methods for suppressing howling are to reduce the volume. The guitar sound hole is facing away from the audio speakers, and a dedicated howling suppression device is used. It is not recommended that users use simple howling suppression equipment to eliminate howling. Simple howling suppression circuits will reduce bass quality. Tiny pickups use electromagnetic pickups. Acoustic pickup is generally not prone to feedback or howling. When generating feedback and howling, you can use special howling suppression equipment to suppress howling, you can also reduce the volume of the sound reinforcement equipment or turn the guitar sound hole back to the sound.

B01P belongs to the P series of Bar pickups. The sound control knobs of B01P pickups use ordinary dial-type carbon film sliding rheostats. This is an electronic component with a long life and excellent performance and is widely used as a volume control knob. Dial-type carbon film sliding resistors change the resistance value by sliding to change the position of metal contacts on the carbon film resistance disk. This mechanical sliding will generate a certain amount of noise when changing the electrical resistance, and it will also appear in the component specification. Clearly label the specific parameters of the noise. For this reason, users may hear a certain amount of noise when using the B01P pickup to adjust the sound. Users do not need to worry. The dial-type carbon film sliding resistors used by YALAV are all good quality resistors. Noise The parameters are small and generally do not affect the normal use of the user.

GUARANTEE

■ Warranty description

Consumers purchase "YALAV ELECTRONICS" or "YALAV" branded products through the official website or the designated distributor of the official website. Within 7 days from the date of purchase, the product has quality problems under normal operating conditions (non-human damage) or Quality failure, without unauthorized dismantling, the product has been detected by YALAV technicians for normal use. The user can choose to return, exchange or repair based on the proof of purchase. Within 15 days from the date of purchase, For non-human faults, users can choose to exchange or repair based on the purchase voucher. Returns, exchanges or repairs can be handled at the authorized dealer or contact the official website personnel when purchasing the product. For the dealers who terminate the cooperation, they can still enjoy the dealer and Yara within 6 months from the date of termination of the cooperation. For YALAV repair services, the value of the product will be discounted after the product packaging is unpacked and damaged. The distributor of the returned product should note that the packaging cost of the product due to the return is borne by the distributor.

• Warranty coverage

1. When the product is opened for the first time, it appears damaged and scratched, and there is obvious noise or abnormal sound during use;
2. Non-artificial damage or breakage occurs when the piezoelectric probe is installed according to the instructions, and there is no sound or abnormal sound when used according to the instructions;
3. Non-artificial damage to the 6.35mm tail pipe of the pickup when installed in accordance with the instructions, and there is no sound or abnormal sound when used according to the instructions;
4. Non-artificial damage occurs when the sound control knob is installed according to the instruction, and there is no sound or abnormal sound when used according to the instruction;
5. Bar pickups have a one-year warranty during normal use, excluding batteries and other accessories.

• Non-warranty coverage

The product is damaged due to incorrect operation, negligent use or irresistible products.

The product is damaged due to incorrect operation, negligent use or irresistible components such as product cables, plugs, sockets, etc. The product has unavoidable parts loss during frequent use, such as battery buckle, 2.5mm socket interface of piezoelectric probe The long-term frequent plugging and unplugging of the pickup 6.35mm tail pipe socket interface makes it loose. After loosening, it will cause poor contact or noise, the metal contacts of the plug will be corroded, and the connecting wire will be accidentally broken.

Product damage caused by not following the instructions in the product manual.

The product purchase certificate and sales unit's sales certificate cannot be provided, and the purchase date is beyond the warranty period.

• Under the following circumstances, YALAV will refuse to provide free warranty service and provide paid repair services

1. Man-made damage;
2. Incomplete product parts;
3. Product damage caused by fierce collision with other objects during use;
4. The product is crushed and damaged during transportation; The appearance of products and accessories is artificially soiled, scratched, broken, stained, etc. ;
5. Piezoelectric probes, sound control knobs, non-artificial damage or breakage or no sound or abnormal sound when the pickup is not operated and installed in accordance with the instructions

• YALAV will refuse to provide repair services under the following conditions

1. Cannot provide relevant purchase vouchers or products whose content does not match.
2. Purchase vouchers, anti-counterfeiting labels, product body icons and logos, product body stickers, etc. are altered or ambiguous and cannot be identified.
3. The free warranty service provided by the product does not include the product manual and the accessories and packaging boxes indicated in the manual.
4. This warranty does not include shipping costs and does not provide onsite service.

SUPPORT

■ Technical Support

If you still have questions or need other help after reading the above instructions, you can go to the dealer where you purchased the product to inquire about them, or you can visit the official website of YALAV www.yalav.com for related information.

Regarding the above information, if there are any omissions or inconveniences that bother you, we also hope that you can understand. We will further improve the product service and quality. Thank you for your attention and support.
